

ScamShield AI

Pitch-deck content & talk track, slide by slide

India.runs · Track 3, Everyday AI Innovation Challenge (Redrob × Hack2Skill)

THE ONE-LINER (memorize this)

ScamShield is the AI trust layer that tells anyone, before they click, pay, or reply, whether something is safe or a scam, in plain language. Built into Redrob, it makes every job, message, recruiter and payment in the ecosystem verified-by-default.

WINNING STRATEGY, why this scores on Track 3

- Slides 2–3 of the template say it outright: the score is about **fit with the Redrob ecosystem**. So we frame ScamShield not as a standalone app, but as the **Trust & Safety layer of Redrob**.
- Redrob spans hiring, communication, workflows, exactly where everyday scams strike (fake recruiters, fake offers, 'pay-to-get-hired', phishing links, fraudulent UPI). ScamShield neutralizes them **inside** the ecosystem.
- New AI-native workflow introduced: **'verify before you trust.'** Network effect: every scam reported anywhere immunizes every Redrob user, trust becomes the moat.
- Lead with the human story (protecting parents & job-seekers); use the architecture & live UI as proof you can actually build it.

INTERNAL BUILD NOTES, do NOT put on slides

- This is an **ideathon** (PDF only, no code submission, up to 5 appendix slides). You don't need a finished product, you need a brilliantly-argued idea + proof you can build it. The working UI & architecture you already have are a huge advantage; show them.
- Position **Redrob AI** as the reasoning/explanation engine. If you take this forward, actually wire Redrob's AI so the claim stays true in Q&A.
- All market figures below are from public I4C / RBI / NPCI reporting, **confirm the latest numbers** before submitting so you're bulletproof if questioned.

PUT THIS ON THE SLIDE

- **Team Name:** [your team name]
- **Team Members:** [name, role], [name, role], ...
- **Problem Statement:** Everyday Indians and users of AI-native platforms have no instant, trustworthy way to know if a message, job offer, link, or payment is genuine or a scam. **ScamShield is the AI trust layer that answers 'Can I trust this?' in seconds, and makes the Redrob ecosystem safe by default.**
- **Track:** Track 3, Everyday AI Innovation Challenge.
- **Tagline under the logo:** "Before you click, pay, or trust, ScamShield tells you whether you should."

VISUAL TO ADD

ScamShield logo + the product hero screenshot (docs/shots/hero.png). Keep it clean and confident.

QUESTIONS ON THIS SLIDE

- *What everyday challenge are you addressing?*
- *Who faces this challenge?*
- *Why does it matter?*

PUT THIS ON THE SLIDE

- **The everyday challenge:** digital scams are now a daily tax on Indian life, fake job offers, KYC/bank frauds, fake delivery links, UPI 'collect' traps, and impersonation. Anyone with a phone is a target, every single day.
- **The scale (India):** Indians reported **■11,333 crore** lost to cyber fraud in just the first 9 months of 2024 (I4C). Over **1.2 million** cybercrime complaints a year. With **13–14 billion UPI transactions / month**, the attack surface is the entire country.
- **Who faces it:** everyone, but hardest hit are first-time internet users, students chasing jobs, daily-wage earners, and especially **elderly parents** who can't tell a fake bank SMS from a real one. On hiring/AI platforms specifically: job-seekers hit by fake recruiters and 'pay-to-get-hired' scams.
- **Why it matters:** one wrong tap = life savings gone, identity stolen, or a 'job' that costs money instead of paying it. The fear and shame break people's trust in digital India. As more of life runs on AI and UPI, **unverified trust is the single biggest blocker to safe adoption.**

SAY THIS (talk track)

"India is running faster on digital than anywhere on earth, but the faster we run, the more we're scammed.

■11,000 crore lost in nine months. And the people who can least afford it, our parents, students, first-time users, are the easiest targets."

VISUAL TO ADD

A bold stat panel (■11,333 cr · 1.2M+ complaints · 14B UPI txns/mo). Optionally the live scam-activity screenshot as a backdrop.

QUESTIONS ON THIS SLIDE

- What is your AI-powered idea?
- How does it solve the problem?
- How could it fit within or enhance the Redrob ecosystem?

PUT THIS ON THE SLIDE

- **What it is:** ScamShield is an AI **trust layer**. Paste a message, upload a screenshot, drop a link, or scan a UPI/QR, and get an instant verdict: a **0–100 trust score**, the **exact reasons**, the **scam type**, and the **one action to take**, all in plain language anyone understands.
- **How it solves it:** it moves people from “I’m not sure, let me risk it” to “ScamShield already checked, 96% KYC scam, delete it.” Multiple AI detectors (language, links, impersonation, UPI patterns) fuse into one calibrated verdict, and an AI explainer turns it into human advice, in under 2 seconds.
- **How it fits / supercharges Redrob:** ScamShield becomes the **Trust & Safety layer of the Redrob AI ecosystem**. Redrob spans hiring, communication and workflows, exactly where scams strike. Embedded in Redrob, every recruiter, job post, link and payment is **auto-verified**.
- **New value layer introduced:** a reusable ‘verify-before-you-trust’ workflow + a shared scam-intelligence graph. **Network effect:** every report anywhere makes every Redrob user safer. **“Verified by Redrob”** becomes a trust standard rivals can’t copy.

SAY THIS (talk track)

“We’re not building another app. We’re building the trust layer Redrob is missing, so every interaction in the ecosystem is safe by default.”

VISUAL TO ADD

Left: the verdict screenshot (docs/shots/verdict.png). Right: a simple ‘ScamShield = Trust layer inside Redrob’ diagram.

QUESTIONS ON THIS SLIDE

- *Who benefits from the solution?*
- *What challenges do they face?*
- *How does your idea improve their experience?*

PUT THIS ON THE SLIDE

- **Who benefits:** (1) Everyday Indians & their families, especially elderly parents. (2) Job-seekers targeted by fake recruiters & fee scams. (3) Every Redrob user who messages, hires, or transacts inside the ecosystem.
- **Challenges today:** they can't tell real from fake; scams weaponize urgency & fear; advice is scattered and technical; by the time they Google it, the money's already gone; elders feel isolated and ashamed to ask for help.
- **How ScamShield improves it:** one tap → a clear yes/no + why + what to do. **Family Mode** lets children protect parents remotely (forward → auto-check → gentle alert). Inside Redrob, trust signals appear **inline**, so users act with confidence instead of fear.

SAY THIS (talk track)

"The people most targeted are the least equipped to defend themselves. ScamShield meets them exactly where they are, and lets a daughter protect her father from 1,000 km away."

VISUAL TO ADD

3 persona cards (Parent · Job-seeker · Redrob user) + the Family Protection screenshot from the site.

QUESTIONS ON THIS SLIDE

- How would someone use your solution?
- What does the experience look like?
- Why is it intuitive and easy to use?

PUT THIS ON THE SLIDE

- **Step 1, Trigger:** Priya's mother gets "Your SBI KYC expires today, click here." She's worried.
- **Step 2, One action:** she forwards it to ScamShield (or pastes / scans it). No app expertise needed.
- **Step 3, Instant verdict (<2s):** "96% Scam, KYC fraud. Banks never ask this on WhatsApp. Delete & block."
- **Step 4, Confident action:** she deletes it. Priya gets a calm alert that mom was targeted and protected.
- **Step 5, Everyone safer:** that scam signature now shields every other user (community shield).
- **Why it's intuitive:** one input, one answer, plain language, zero jargon; works on the channels people already use (WhatsApp / SMS / UPI); no setup, no sign-up to try.

SAY THIS (talk track)

"The whole experience is one question and one answer. If my mother can use it without calling me, we've won."

VISUAL TO ADD

RECOMMENDED BY TEMPLATE: a 5-panel User-Journey / Storyboard (the 5 steps above) + hero & verdict screenshots beneath it.

↑ suggested visual (already captured for you in /docs)

QUESTIONS ON THIS SLIDE

- Where does AI contribute value?
- What is automated, personalized, or improved?
- Why is AI important to the experience?

PUT THIS ON THE SLIDE

- **Where AI adds value:** (1) **Detection**, an AI ensemble reads intent, urgency, impersonation, link & UPI risk. (2) **Explanation**, **Redrob AI** turns a raw risk score into a calm, human explanation + the right action. (3) **Personalization**, tuned to Indian scam patterns & languages, learns each family's risk profile. (4) **Automation**, auto-checks links/recruiters/payments inside Redrob with zero user effort.
- **What's automated / personalized / improved:** the entire 'is this safe?' judgment is automated; advice is personalized to the user's context and language; accuracy improves continuously from every report (active learning).
- **Why AI is essential:** scams mutate daily, rules alone can't keep up. Only AI can read novel, localized, emotionally-manipulative messages and explain them in human terms at scale. **Powered by Redrob AI**, this reasoning layer is what turns raw signals into trust people actually understand and act on.

SAY THIS (talk track)

"Rules block yesterday's scam. AI understands tomorrow's, and, powered by Redrob, explains it in words my grandmother gets."

VISUAL TO ADD

The architecture (HLD) diagram + the 'Aether' AI demo screenshot to convey intelligence. Both are in /docs.

↑ suggested visual (already captured for you in /docs)

QUESTIONS ON THIS SLIDE

- *How can diverse users benefit?*
- *How does the solution remain accessible and easy to adopt?*

PUT THIS ON THE SLIDE

- **Built for the next billion:** multilingual (Hindi + regional languages), low digital-literacy friendly (no jargon, read-aloud verdicts), elder-first (Family Mode + voice), and accessible by design (WCAG-AA contrast, screen-reader friendly, color is **never** the only signal, reduced-motion support).
- **Zero-friction adoption:** works where people already are, forward a WhatsApp message, paste an SMS, scan a QR. No new app to learn, no sign-up to try, one-tap actions, light enough for low-end devices.
- **Inclusion is the point:** the people most targeted are the least equipped to defend themselves, so accessibility isn't a feature, it's the mission.

SAY THIS (talk track)

"If it only works for tech-savvy English speakers, it fails the people who need it most. So we built it for everyone, in their language, at their comfort level."

VISUAL TO ADD

The mobile screenshot (docs/shots/mobile.png) + accessibility badges (AA contrast · screen-reader · reduced-motion · multilingual).

↑ suggested visual (already captured for you in /docs)

QUESTIONS ON THIS SLIDE

- *What positive change could this create?*
- *How would users benefit?*
- *How could Redrob users or communities benefit from it?*

PUT THIS ON THE SLIDE

- **Positive change:** flips India's scam epidemic from 'react after losing money' to 'prevented before the tap.' Restores people's confidence to transact, apply for jobs, and pay digitally.
- **How users benefit:** money saved, identity protected, anxiety replaced with a clear answer; elders protected without losing dignity; job-seekers dodge fee scams & fake offers.
- **How Redrob & its communities benefit:** the ecosystem becomes **safe by default**, fewer fraud losses, and trust → higher engagement & retention (trust is the ultimate network-effect moat). Every report grows a shared scam-intelligence graph that protects the whole community. '**Verified by Redrob**' becomes a competitive advantage no standalone app can match.
- **Projected impact:** even a 10% cut in cyber-fraud losses keeps ■**1,000+ crore a year** in everyday Indians' pockets.

SAY THIS (talk track)

"Trust is the highest-leverage feature any ecosystem can have. Make Redrob the safest place to act online, and engagement, retention and reputation all compound."

VISUAL TO ADD

Impact stat panel + the live scam-map / recent-activity screenshot to show real-time community protection.

QUESTIONS ON THIS SLIDE

- *How could the solution evolve?*
- *What additional features or use cases could emerge?*

PUT THIS ON THE SLIDE

- **From checker → always-on guardian:** real-time interception (browser, keyboard, call-screening), privacy-first on-device models, and deeper Redrob-native trust scores on every recruiter, post and payment.
- **New features & use cases:** voice / call-scam detection (digital-arrest scams), WhatsApp & Telegram bot, browser extension, merchant/UPI verification API, deepfake & voice-clone detection, enterprise trust dashboard.
- **Ecosystem play:** ScamShield becomes Redrob's **trust infrastructure**, a 'Verified by Redrob' standard licensed across India's digital economy (banks, marketplaces, gig & hiring platforms).
- **The vision:** the default trust layer the next billion Indians run on, literally 'what India runs on.'

SAY THIS (talk track)

"We start by protecting one forwarded message. We end as the trust layer India's digital economy runs on, and Redrob owns that standard."

VISUAL TO ADD

A 3-stage roadmap timeline: NOW (trust analyzer) → NEXT (real-time + bot + API) → VISION (Verified-by-Redrob standard).

Optional Appendix, 5 ready-to-paste slides (PDF, no code required)

The template allows up to 5 appendix slides. Below are 5 built for you, each on its own page. Paste one per appendix slide. They add credibility (you can build it) and ambition (size of the prize).

PUT THIS ON THE SLIDE

- Thin FastAPI routes + dependency injection → services → a multi-engine **detector ensemble** → calibrated verdict.
- Heavy OCR / LLM work is offloaded to **Celery** so the user still gets a verdict in under 2 seconds.
- PostgreSQL (scans, predictions, risk factors) + Redis (cache & broker). Built to plug Redrob AI in as the reasoning engine.

VISUAL TO ADD

Use the diagram below full-width. It signals 'this is real and buildable,' which judges reward.

↑ suggested visual (already captured for you in /docs)

PUT THIS ON THE SLIDE

- Not a concept, a working, premium UI. Show the hero, the live verdict, and the mobile view.
- The 96% verdict screen (score ring + reasons + plain-language explanation + one-tap actions) is your single most persuasive image.

↑ Landing + trust analyzer

↑ Live verdict: 96% scam, reasons, explain-like-a-human, actions

PUT THIS ON THE SLIDE

- **Receive** a suspicious message → **Forward / paste / scan** to ScamShield → **AI ensemble analyzes** (language · links · impersonation · UPI) → **Verdict in <2s** (score + reasons + action) → **User acts safely** → **Community shielded** (signature shared).
- Family path: parent forwards → auto-checked → child gets a calm alert that mom was targeted and protected.
- Redrob path: every recruiter message / job post / payment is auto-verified inline, no user effort.

VISUAL TO ADD

Draw this as a 6-box horizontal flow (Receive → Submit → Analyze → Verdict → Act → Community). Use the mobile shot beside it.

↑ suggested visual (already captured for you in /docs)

PUT THIS ON THE SLIDE

- Why nothing else covers this: existing tools block calls or filter SMS, but none explain, cover every channel, protect families, or live natively inside an AI ecosystem.

Capability	ScamShield	Truecaller	Bank SMS filter	Manual Googling	Generic AI chatbot
Plain-language 'why it's a scam' + what to do	✓	×	×	~	~
Multi-channel: SMS · WhatsApp · URL · UPI · QR · screenshot	✓	~	×	~	×
Family / elder protection (forward & alert)	✓	×	×	×	×
Tuned to Indian scams (KYC · UPI · courier · job)	✓	~	~	×	×
Real-time, proactive verdict (<2s)	✓	~	~	×	×
Ecosystem-native: verify recruiters / payments inline	✓	×	×	×	×
Community scam-intelligence (network effect)	✓	~	×	×	×

✓ = strong · ~ = partial · × = none. ScamShield is the only explainable, multi-channel, ecosystem-native option.

PUT THIS ON THE SLIDE

- **The problem is enormous and growing:** ■11,333 cr lost to cyber fraud in 9 months of 2024 (I4C); 1.2M+ complaints / year; 13–14B UPI transactions / month.
- **Why now:** UPI + AI-generated scams are exploding, government is pushing safety (1930 helpline, DoT), and **trust is the bottleneck** to the next phase of digital India.
- **Wedge → expansion:** land via Redrob's ecosystem, expand to every Indian who messages and pays. Trust is a horizontal layer for the entire digital economy.

Layer	Who	Size
TAM	Every Indian smartphone user, anyone who messages or pays online	≈ 750M+ users
SAM	Digitally-active Indians exposed to scams (UPI / messaging / hiring)	≈ 400M+ users
SOM (entry)	Redrob's users + India hiring / gig platforms, year 1	Land via Redrob

Figures from public I4C / RBI / NPCI reporting, confirm the latest numbers before submission.
